

VEGWARE SUSTAINABILITY REPORT 2024

From January to December 2024, our clients made a positive environmental impact by choosing Vegware's plant-based catering disposables. By replacing plastics with compostable packaging designed to break down with food waste, they reduced waste and eased landfill pressure. Every choice helps shape a sustainable, circular economy.

VEGWARE SUSTAINABILITY REPORT 2024

From January to November 2024, in partnership with our local recycling partner, a dedicated Vegware recycling bin at one of our client's locations collected and composted used Vegware packaging together with food waste. This collaborative effort diverted waste from landfills and produced nutrient-rich compost, showcasing how sustainable practices can transform waste into valuable resources.
